

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REGISTRATION REPORT.

To His Excellency the Governor and the Honorable Council:

Pursuant to the law passed at the last session of the legislature, and approved September 8, 1883, I herewith present the registration report of the state of New Hampshire relative to births, marriages, divorces, and deaths, from April 1, 1882, to Dec. 31, 1883, inclusive. The report properly embraces a period of one year ending March 31, 1883, but as the law above mentioned made the official year of this department to correspond with the calendar year, the returns embraced in the period between March 31 and December 31 would either have to be published separately or not at all, it was deemed best to add the same as an appendix to the report of 1883.

Owing to the fact that trusty calculations cannot be made, especially as regards deaths, from the returns of a portion of the year, only a brief table has been arranged relating to this period.

Much labor has been put into this report, which to the casual observer might seem to be of but little value, but it must be remembered that it is not wholly for the present that such a work has been undertaken. The value of many of the following tables can only be reached and appreciated after a series of years have elapsed and a similar report issued each year. Then the state will be in possession of data relative not only to sickness and the various causes of death, but to many other factors which materially affect the people of the state. Upon the record of a birth, marriage, or death often rests important testimony which is essential in a court of law to the securing of a judgment based upon justice. The want of past records in a consideration of important cases of to-day is, in many instances,

keenly felt. It is with a view of providing for such exigencies as well as for sanitary studies, that a report of this character is presented.

HISTORICAL MENTION.

As early as 1714 the Province of New Hampshire passed a registration law, and from that date down to the present time some law upon this subject has existed. The earlier laws were complete failures, so far as any results worthy of note were secured. About thirty-five years ago (1849), at the instance of the New Hampshire Medical Society, a new law was enacted which in many respects was well enough, but it failed to accomplish its intended mission because the various secretaries of state, upon whom devolved the duty of state registrar, took too little interest in the matter to demand of the several town-clerks its enforcement. This is the principal reason why we have no statistics or records of value in this department for the last thirty years. It is true the law was quite defective during this period, still no doubt a registration of great value could have been obtained. Hon. A. B. Thompson, recognizing the worth of such records, undertook, after his election to the office of secretary of state, to bring about some results tending to secure the returns that the law required, and his labors were rewarded to the extent that in 1880 he issued the first registration report ever published by the state. He also suggested to the legislature some amendments to the law, which were readily passed.

The legislature of 1881, in the law that created the State Board of Health, placed the execution of the registration law in the hands of that board. The two succeeding reports (1881 and 1882) were issued as a part of the report of the State Board of Health, the first being very meagre, and the next quite extensively tabulated. The first table given in this report will show something of the progress made in securing the returns which the law contemplates.

The last legislature (1883) passed a law quite different from any in force, and from which better results are expected. (See Appendix.) Letters received from many of the town clerks, and interviews with them, indicate that the law is very generally complied with, and that an approximately correct registration is being secured under it.

THE NECESSITY OF REGISTRATION BY THE STATE.

The necessity of a record of all births, marriages, and deaths that occur within the several towns is growing more and more apparent each year, and it is especially important, owing to the careless manner in which the records of some towns are kept, that the state should require accurate returns from all the towns. The only records of this kind now available to some of the towns themselves are in possession of this department, the town record having been lost by fire. Again, without the intervention of the state many towns would immediately abandon every system of registration, because they have given no attention to its importance and have failed to appreciate its value. As an illustration of this point the prosperous town of Hinsdale may be cited: After a great deal of correspondence on the subject, and strenuous efforts on the part of the town-clerk, a report for the year 1882 was secured, though not till long after it was due. The clerk of the town then wrote as follows:

I. A. WATSON:

DEAR SIR: I sent you yesterday Dr. ———'s report, which makes all that can possibly be got this year, so I do not see as I have anything to say on the blank. I will say to you that these records that I have sent to you, and which I have recorded, are the first that have been recorded on the books for years. In this my first year as town-clerk, I have seen the importance of these records.

Yours truly,

C. S. FAY, *Town Clerk.*

The efforts made within the last three or four years have brought about a better understanding of the importance of the registration of vital statistics, and most of the towns now cheerfully comply with the law. It is safe to predict that under the present registration law as efficient reports will be secured as are obtained by any state in the Union.

ON BLANKS.

For the convenience of physicians a blank card was devised, having upon one side an extract from the registration law, showing the duties of the physician in the case, and upon the other the different items upon which the law requires a report. The following is the exact size, with the printed matter thereon, of the death and birth cards.

State of New Hampshire. - - - Certificate of Birth.

Date and Place of Birth,

Name of Child,.....**Sex,*.....*Color,*.....

Living or Stillborn,.....No. of Child, 1st, 2d, &c.....

Date of Burial,.....188 . *M.*

Place of burial,..... Cemetery..... Undertaker.....

Extract from the Pamphlet Laws of 1883, Chap. 70.

SECTION 1. ***

III. The record of a death shall state its date, the full Christian and surname of the deceased, the sex, color, condition (whether single or married), age, occupation, place of birth, place of death, the full Christian and surnames and birthplaces of parents, and the disease or cause of death.

SEC. 4. Whenever any person shall die, or any stillborn child shall be brought forth in this state, the physician attending at such bringing forth, or last sickness, shall fill out and deliver to the undertaker, town-clerk, or other person superintending the burial of said deceased person, a certificate, duly signed, setting forth, as far as may be, the facts required in the record of a death, according to section one of this act; and it shall be the duty of the undertaker, or other person having charge of the burial of said deceased person, to add to said certificate the date and place of burial, and having duly signed the same, to forward it to the clerk of the town or city, and obtain a permit for burial; and in case of any contagious or infectious disease, said certificate shall be made and forwarded immediately.

SEC. 11. If any person shall wilfully neglect or refuse to perform any duty imposed upon him by the provisions of this act, he shall be fined not more than one hundred dollars for each offence, for the use of the town in which the offence occurred; and it shall be the duty of the state registrar to enforce this section as far as comes within his power.

SEC. 13. This act shall take effect and be in force on and after the first day of January, 1884; and all acts and parts of acts inconsistent with this act are hereby repealed.

Approved September 7, 1883.

NOTE. It is expected that town and city clerks will keep on hand a supply of these blanks; but should any physician prefer, they may be obtained by addressing the "State Registrar, Concord, N. H.," stating number required, etc.

Extract from the Pamphlet Laws of 1883, Chap. 70.

SECTION 1. ***

I. The record of a birth shall state its date and place of occurrence, full Christian and surname (if named), color and sex of child, whether living or stillborn, and the full Christian and surnames, color, occupation, residence, and birthplace of parents.

SEC. 3. The attending physician, accoucheur, midwife, or other person in charge, who shall attend, assist, or advise at the birth of any child, living or stillborn, within the limits of any town or city in this state, shall report to the clerk of such town, **within six days thereafter**, all the facts regarding such birth, as is required in section one of this act.

SEC. 11. If any person shall wilfully neglect or refuse to perform any duty imposed upon him by the provisions of this act, he shall be fined not more than one hundred dollars for each offence, for the use of the town in which the offence occurred; and it shall be the duty of the state registrar to enforce this section as far as comes within his power.

SEC. 13. This act shall take effect and be in force on and after the first day of January, 1884; and all acts and parts of acts inconsistent with this act are hereby repealed.

Approved September 7, 1883.

NOTE. It is expected that town and city clerks will keep on hand a supply of these blanks; but should any physician prefer, they may be obtained by addressing the "State Registrar, Concord, N. H.," stating number required, etc.

Under the old law, which required an annual report only from the physician, a large blank was in use which was filled out at the end of the year, and returned to the town-clerk. In this system the great defect was in the fact that the physician made out the record at the end of the year from memory alone in many instances, and in this way neglected to record many births and deaths. The present blank being of the size of a postal card, is readily carried in the diary, and the record can be made out at the time it should be. On the opposite page is a copy of the burial permit blank now required in all towns of the state.

The design of all these blanks is to make the entire system of registration as simple and as easily accomplished as possible.

RESULTS SECURED.

The following is the total number of births, marriages, and deaths reported during the year: Births, 6150; marriages, 3495; deaths, 5421. Rate per 1000 for the entire population of the state is as follows: Birth rate, 17.72; marriage rate, 10.07; death rate, 15.62.

UNDERTAKER'S VOUCHER.

BIRTHS.

The registration report for the year ending March 31, 1883, shows a return of a larger number of births than has heretofore been reported in the state in a single year. There were reported in 1880, 4,249; in 1881, 4,615; in 1882, 6,124; and in 1883, 6,150. It will be seen by these figures that there was but a small increase over last year's report, which verifies the assertion formerly made, that the law under which these returns were obtained would never secure an accurate registration. No efforts have been spared to secure a correct record, yet the failure to do so is evident when these figures are compared with the average percentage in those states which have, approximately, a correct registration. Based upon such calculations, at least 1,500 births remain unreported. It is expected that the law which came into force on January 1 of the present year will secure much better results. It is difficult, if not impossible, to secure an accurate record of births under any system that is in use, yet a comparatively correct record has been obtained under a law similar to that now in force in this state.

The preceding tables exhibit the sex, parentage, nationality, etc., by towns.

The following table exhibits the number reported from each county, with sex, and also the excess of males over females, which is comparatively uniform in all states and countries. Although deficient as to the total, the ratios are undoubtedly nearly or quite correct:

TABLE 4.

BIRTHS BY COUNTIES, SHOWING PROPORTION OF MALES TO FEMALES,
1883.

Counties.	Males.	Females.	Excess of males.	Excess of females.	Sex not stated.

Table 5 shows the percentage of American and foreign births, so far as the same are given. It is quite probable that nineteen twentieths, at least, of those reported in the column of "parentage not reported," are of foreign origin.

Of the 6,150 births reported, the parentage is represented as follows: American, 3,312; foreign, 1,430; one parent foreign, 549; parentage not stated, 359.

Five colored births only were reported.

MARRIAGES.

This state undoubtedly secures as accurate a registration of marriages as any in the country. As remarked in a former report, this is largely due to the promptness of the clergy in complying with the requirements of the law. Another important factor in securing correctness is the town-clerk's record of certificates issued, by which he is enabled to ascertain who the delinquents are, and thus has it in his power to reach them and secure the necessary record. Very few clergymen are negligent in this respect: most of the delinquents are to be found among the justices of the peace, who not infrequently perform this ceremony. Three thousand two hundred and forty-six marriages were reported during the year. Table 8 shows the nationality of each, by counties.

* This table necessarily varies, in some instances, from the nosological classification in Table 15. For instance, in the latter, "cancer of stomach," "cancer of breast," etc., would be classed under the general term, "cancer." "Inflammation," "congestion," etc., would be classed under "not stated," while in this table it is given as reported.

† Classed with males.

A BRIEF SUMMARY OF THE RECORD OF DEATHS.

The preceding tables have been compiled with great care and labor, and are sufficiently full to furnish a basis for the construction of any additional tables that may be desired by any one studying the subject of vital statistics, particularly the subject of deaths.

Other and interesting tables might have been made, but the foregoing seemed to be ample for the ordinary purposes of such a record.

Should future experience show that other tables are required, they will be constructed. It is quite probable that as our registration becomes more accurate in all its branches and more perfect in detail, additional tables will be advisable.

After a series of years, valuable tables of comparison—more valuable than all others—will be made. It is by such deductions that we are to obtain the largest amount of information relative to the life movements of the people, and the various causes that bear upon the complex questions affecting the physical welfare of communities. The record of two or three years does not suffice to give such data, but a period covering twice or thrice that length of time would allow the formulation of deductions that would be trustworthy.

The conclusions which must be of the greatest value are those bearing upon the causes of death. If, after a few years, the rate of mortality in a certain town or district is found to be excessively high in any particular disease, the evidence is conclusive from the record itself that some unusual cause for such a fatality exists in that locality, and the conditions may be sought and the remedy applied.

PRINCIPAL CAUSES OF DEATH.

The following diagram will be found to possess much that is of interest, as it shows at a glance the relative proportion of twenty of the most fatal diseases as shown by this report :

CAUSES OF DEATH. 25 50 75 100 125 150 175 200 225 250 275 300 325 350 375 400 425 450 475 500 600 700 800 825

The long, black line which stands at the head, is in itself a terrible commentary upon a silent foe which insidiously invades every community, and gathers its victims largely from the ranks of those who have not yet reached the meridian of life. If 827 human beings were annually killed upon the railroads of our state, the legislature would promptly prohibit the running of trains. If a contagious disease were annually imported into the state that swept from existence 827 living souls, the state would protect every rod of her frontier by a cordon that would require an army of 10,000 able men, and the expense would be of secondary account. If 827 citizens of New Hampshire were annually carried to eternity through an epidemic that did its fearful work in a few days, panics and demoralization would follow, business would be stagnated, and a general exodus from the state would be the result. But the spectacle is different. These 827 souls drop into the sea of eternity as silently as the leaf falls upon the bosom of the lake, and the ripples made reach not the public, and fall lighter upon the friends because expected. But these deaths, the majority of them, in the light of modern study and research, are as needless as deaths from other preventable diseases. The opinion is entertained by eminent physicians and sanitarians, who have carefully considered all the factors that bear upon this disease, that it may be to a very large extent avoided. Without any hereditary tendency, the occurrence of consumption must be from a violation of some of the laws of physical life for which the individual is responsible. With a hereditary family tendency to this disease, the individual has a warning that should lead to the adoption of such habits of life as will tend to maintain the system in the best possible state of existence. To this end it becomes a duty, not only of physicians, but of the public, to consider seriously this alarming subject. The proportion of deaths from consumption in this state corresponds very nearly to that of all the Eastern and Middle states. Over fifteen per cent. of the total mortality of the state is from this one disease. The difference in the mortality rates between the country and the cities of our state is not so marked as might be supposed. The following tables show more definitely the ravages of this disease throughout the state, with some special tables relating to it in our cities :

Males.....						8
Females.....						15
Percentage to total mortality of city..	16.91								

Of the nationality of the decedents, 593 were American born, 134 foreign born, and 100 nationality not stated. It is fair to assume that at least 75 per cent. of the latter should be classed as foreign born. Under such a classification we would have American born 618, foreign born 209. The census of 1880 shows in this state 300,697 native born, and 46,294 foreign born persons. This would show, under the classification just given, a mortality of 2.5 per 1,000 among the native born, against 4.5 per 1,000 among the foreign born, from this disease. When it is remembered that every child born on American soil is classed as native born, no matter if the parents have just arrived from sunny Italy, or elsewhere, it is evident that the actual mortality among the foreign element is still larger than is represented in the percentages given.

The excess of female decedents over males presents another important phase in the study of this disease, and strongly confirms much that has been written on the preventable aspect of consumption—502 females and 325 males.

These stern and terrible facts are given, in the briefest manner, for reflection and study. The lessons they unfold to the thinking mind are many and sad.

PNEUMONIA.

To this disease 498 persons succumbed during the year embraced in this report. This is a disease largely of childhood and old age, the greatest immunity usually being between the ages of five and twenty. The greatest fatality is among those under five years and those over fifty years of age.

The winter and spring months, which embrace inclement seasons of the year, are much more prolific in deaths from pneumonia than any other period of the year.

Many of these cases doubtless follow a cold, taking the form of broncho-pneumonia, and result from inattention and carelessness, when a proper regard and care for one's self, in the earlier stages, would have prevented serious consequences. A due precaution against sudden changes of temperature, with good hygienic surroundings, would undoubtedly reduce very greatly the number of deaths that annually occur from this disease.

TYPHOID FEVER.

The report of last year showed 214 deaths from typhoid fever.

The present report, though embracing 420 more deaths than the last, shows only 166 deaths from this disease. Supposing the mortality rates to have been the same as last year, there would have been 231 deaths from typhoid, showing a diminished death rate which amounts to the saving of sixty-five lives from this disease alone. To what extent the sanitary work which has been done during the year has contributed to decrease this disease it is not possible to demonstrate, but it is not unreasonable to presume that it has saved many valuable lives. Just in proportion to the amount of such work done will typhoid diminish. This has been repeatedly proven by sanitary improvements in several cities and towns in England, and has been corroborated by similar work in this country. Sporadic and non-epidemic cases must have their origin in local causes. There are times, as in epidemics, when probably other forces than purely local conditions exert an influence which adds numerically and malignantly to this disease. What this force or condition is which fans the smouldering fires of disease into a wide-spread conflagration, without any apparent change in environments, is a question *sub judice*. It is believed, however, that without certain local conditions, this unknown factor would be inert; hence local causes are primary.

Neither age nor sex is exempt from this disease, nor does season alone protect, although by far the greater number of cases occur in the late summer or autumn.

DIPHTHERIA.

One hundred and nine deaths occurred from this disease during the year. This also is a very satisfactory showing, as it is thirty less than was reported last year. When the public mind comprehends the fact that this disease is subject to control, by good sanitation and isolation, the rate of death from it will be represented by much smaller figures.

This is essentially a disease of childhood. Only fourteen deaths from this malady were in persons above fifteen years of age. It becomes, then, a duty for parents to use every means within their knowledge and power to protect their children during the tender age in which this disease most severely and fatally flourishes.

CROUP.

Although many observers believe that croup and diphtheria are identical, the mortality rates are given separately in this report. This also is a disease of early life, as the table below shows, the greatest mortality being among children less than one year of age.

TABLE 28.

CHOLERA INFANTUM.

The lives of 278 precious and innocent children, most of them within the realm of babyhood, the joy, the ambition, and perhaps the supremest happiness of watchful parents, were sacrificed by the ravages of this needless and preventable disease. The unsanitary localities of cities are the hot-beds of this infantile mortality. The greatest death rate from this disease in this state was at Manchester, where the mortality is large, furnishing 131 deaths. The percentage from this disease in Manchester, compared with the total mortality of the city, is 10.60, while for the rest of the state it is but 0.31. The population of Concord, Nashua, Dover, Portsmouth, and Keene aggregates 55,294 (over 20,000 more than the population of Manchester), yet the average percentage of deaths from cholera infantum to the total number of deaths in these five cities is only 3.33. The city of Manchester approximately contains one tenth part of the population of the state, yet nearly one half of the deaths from cholera infantum are reported from that city. These facts are telling ones, which the health authorities of that city ought to take into serious consideration.

SCARLET FEVER.

Only fifty-eight deaths occurred from this disease during the year. This is a very respectable showing, and results from two causes :

1. The disease has prevailed in an unusually mild form.
2. The public are better informed as to its real character, and recognize to a greater extent than ever before the importance of avoiding exposure to its contagion, and the value of isolation. With an increasing knowledge of this subject, its mortality ought to be reduced to still smaller figures.

The following table exhibits by counties the location and extent of the fatal cases.

The second table shows the season of its prevalence by percentages, and the ages of the decedents.

That this is almost wholly a disease of childhood, so far as its fatality goes, has long been known, and the table verifies the fact.

DISEASES OF THE NERVOUS SYSTEM.

Under this head may be placed the great majority of deaths classed under "heart disease," "paralysis," "apoplexy," and some kindred diseases. To properly review the causes which lead to such results would not only require a better classification of the causes of death, but an examination of all the agencies which bear upon both the physical and mental organization. To what extent the so-called progress in civilization, with its attendant excitement and rush and business anxiety, has contributed to increase this class of diseases, we are unable to say, because the past has given us no data for calculation; but it is reasonable to presume that such causes are among the most potent.

CONCLUSION.

It is believed that the foregoing tables will be found of great value to all who desire to study the causes and conditions which govern the mortality of our state. Other tables will probably be added in future reports, as the registration returns now being received for the year 1884 indicate a correctness that has never before been attained in the state. The indications are, that in a very short time this system will be so well perfected that we can take pride in the accuracy of our registration reports.

Respectfully submitted.

Irving A. Watson.

State Registrar.

THE REGISTRATION LAW.

AN ACT FOR THE BETTER REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Be it enacted by the Senate and House of Representatives in General Court convened :

SECTION 1. The secretary of the State Board of Health shall be the registrar of vital statistics for the state, and shall furnish to sextons, to clergymen, and others authorized to marry, to physicians, town-clerks, and clerks of the society of Friends, a copy of this act, and suitable blanks for recording births, marriages, and deaths, so printed, with appropriate headings, as readily to show the following facts and such others as may be deemed necessary to secure an accurate registration :

I. The record of a birth shall state its date and place of occurrence, full Christian and surname (if named), color and sex of child, whether living or still-born, and the full Christian and surnames, color, occupation, residence, and birthplace of parents.

II. The record of a marriage shall state its date and place of occurrence, the name, residence, and official character of the person by whom solemnized, the full Christian and surnames of the parties, the age, color, occupation, and residence of each, the condition (whether single or widowed), whether first, second, or other marriage ; and the full Christian and surnames, residence, color, occupation, and birth-place of their parents.

III. The record of a death shall state its date, the full Christian and surname of the deceased, the sex, color, condition (whether single or married), age, occupation, place of birth, place of death, the full Christian and surnames and birthplaces of parents, and the disease or cause of death.

SEC. 2. The attending physician, accoucheur, midwife, or other person in charge, who shall attend, assist, or advise at the birth of any child, living or still-born, within the limits of any town or city in this state, shall report to the clerk of such town, within six days thereafter, all the facts regarding such birth, as is required in section one of this act.

SEC. 3. Every person authorized to unite persons in marriage shall make a record of every marriage solemnized before him, in conformity with the requisitions prescribed for blank records of marriages in section one of this act, and shall within six days thereafter deliver or forward to the clerk of the town in which the marriage intention was recorded a copy of such record of marriage.

SEC. 4. Whenever any person shall die, or any still-born child shall be brought forth in this state, the physician attending at such bringing forth, or last sickness, shall fill out and deliver to the undertaker, town-clerk, or other person superintending the burial of said deceased person, a certificate, duly signed, setting forth, as far as may be, the facts required in the record of a death, according to section one of this act; and it shall be the duty of the undertaker, or other person having charge of the burial of said deceased person, to add to said certificate the date and place of burial, and having duly signed the same, to forward it to the clerk of the town or city, and obtain a permit for burial; and in case of any contagious or infectious disease, said certificate shall be made and forwarded immediately.

SEC. 5. In the case of any deceased person not having had the attendance of a physician in his or her last sickness, the town-clerk may issue and sign the certificate of death, upon presentation of such facts as may be obtained of relatives, persons in attendance upon said deceased person during said last sickness or present at the time of death, and the permit for burial shall be issued upon such information.

SEC. 6. No interment or disinterment of the dead body of any human being, or disposition thereof in any tomb, vault, or cemetery, shall be made without a permit as aforesaid, nor otherwise than in accordance with such permit. No undertaker or other person shall assist in, assent to, or allow any such inter-

ment or disinterment to be made, until such permit has been given as aforesaid; and it shall be the duty of every undertaker or other person having charge of any burial place as aforesaid, who shall receive such permit, to preserve and return the same to the clerk of the town within six days after the day of burial.

SEC. 7. The town-clerk may appoint suitable and proper persons, not exceeding two in number in any town, as sub-registrars, who shall be authorized to issue burial permits based upon a death certificate, as hereinbefore provided, in the same manner as is required of the town-clerk; and the said record of death upon which the permit is issued shall be forwarded to the town-clerk within six days after receiving the same, and all permits by whomsoever issued shall be returned to the town-clerk, as required by section seven of this act. The appointment of sub-registrars shall be made with reference to locality, so as to best convenience the inhabitants or the town.

SEC. 8. The clerk of every town shall keep a chronological record of all births, marriages, and deaths reported to him, and shall annually, in the month of January, transmit a copy of the record of all births, marriages, and deaths occurring during the year ending December 31st next preceding such said report, to the state registrar, together with the names, residences, and official stations of all such persons as have neglected to make returns to him in relation to the subject-matters of such records, which the law required them to make.

SEC. 9. The state registrar shall cause the returns made to him in pursuance of the preceding section to be arranged, alphabetic indexes of all the names contained therein to be made, and the whole bound in convenient volumes and carefully preserved in his office. He shall annually make and publish a general abstract and report of the returns of the preceding year in such a form as will render them of practical utility, not more than one thousand copies of which shall be printed, one copy of which shall be forwarded to every town, one copy to each senator and representative, one copy to each state and territory in the Union, and the remainder to such departments, libraries, and persons as the state registrar shall direct.

SEC. 10. The town-clerk's record of any birth, marriage, or death, or a duly certified copy thereof, shall be *prima facie* evi-

dence of such birth, marriage, or death, in any judicial proceeding.

SEC. 11. If any person shall wilfully neglect or refuse to perform any duty imposed upon him by the provisions of this act, he shall be fined not more than one hundred dollars for each offence, for the use of the town in which the offence occurred, and it shall be the duty of the state registrar to enforce this section as far as comes within his power.

SEC. 12. The fees of physicians for making returns of each birth and death, as herein provided, shall be the same as are now in force; and the clerk of each city and town shall be paid by such city or town for receiving, recording, and returning the facts required to be recorded by this act, the sum of fifteen cents for each birth, marriage, and death.

SEC. 13. This act shall take effect and be in force on and after the first day of January, 1884; and all acts and parts of acts inconsistent with this act are hereby repealed.

FIFTH ANNUAL REPORT

RELATING TO THE

REGISTRATION AND RETURN

OF

Births, Marriages, Divorces, and Deaths

IN NEW HAMPSHIRE

FOR THE YEAR 1884.

VOLUME II—NEW SERIES.

CONCORD:

PARSONS B. COGSWELL, PUBLIC PRINTER.

1885.

REGISTRATION REPORT.

To His Excellency the Governor and the Honorable Council:

Herewith is presented the fifth annual report relative to the registration of births, marriages, divorces, and deaths in the state of New Hampshire, for the year ending December 31, 1884.

The various tables presented in this report are arranged in the same manner as in the report of 1883. The tables are made up so that no obscurity shall exist as to the facts given. If several facts are required concerning questions bearing upon the mortality records, it may be necessary to consult two or three different tables to obtain all the points desired. There are certain important factors to a complete record that cannot be obtained until our system of registration arrives at a state nearer perfection than now exists. When it is remembered that we have but just begun to give attention as a state to the subject, and note the progress that has already been made, we may be hopeful for an accurate registration in the near future.

The registration of deaths has already reached a degree of accuracy that renders it reliable, and of great value in studying questions affecting the mortality rates of different localities. By reference to other parts of this report, a better understanding may be had of the status as well as of the amount of work already done in this direction.

REGISTRATION REPORT.

TABLE 1.

Showing Births, Marriages, and Deaths for 1880, 1881, 1882, 1883, and 1884, with annual increase in number reported.

Sullivan.....	18,161	268	14.75	138	7.59	273	15.03
Grafton.....	38,788	643	16.57	332	8.55	652	16.80
Cos.	18,580	406	21.85	202	10.87	263	14.15
Total	346,991	6,247	18.00	3,292	9.48	6,194	17.85

There has been a slight increase over 1883 in the number of Births reported, a falling off in marriages, and quite a marked increase in the number of deaths reported.

The percentages given last year were, 17.72, 10.07, and 15.62 respectively.

The death rate per 1,000 of 17.85 above given, is believed to be approximately correct for the entire state; hence any conclusions based upon the death record of the present year must be as nearly correct as it is possible to obtain.

REGISTRATION REPORT.

BIRTHS.

The number of births recorded for the year 1884 is slightly in excess of that hitherto reported in a single year. There were reported in 1880, 4,249; 1881, 4,615; 1882, 6,124; 1883, 6,150; 1884, 6,247.

While there is evidence of a nearer approach to accuracy in each year's registration, yet the progress is not so rapid as could be wished for. Probably this has been the experience in all states having a registry of vital statistics. The obstacles in the way of securing a correct registration of births are greater than those met with in obtaining a like record of marriages and deaths, and for reasons which can readily be seen. The present law relating to the registration of births, while in some respects an improvement over the law in force prior to 1883, is still defective in two or three points.

1. The report of the attending physician, or person officiating as such, is required so soon (six days) that the child generally is not named; hence the report given the town-clerk is deficient in this respect.

2. Quite a class, especially among the poor, who receive no professional care, are left unreported.

3. Some physicians do not report as the law requires.

When all the circumstances bearing upon the collection of such data are taken into consideration, it becomes a problem not easy to solve. A law requiring parents to have all births registered at the town-clerk's would be, if dependence were placed upon this method alone, open to serious objections, until after years of educational and executive work in securing its enforcement. There seems at present to be no way of obtaining a correct record, except by employing more methods than one in the collection of such statistics. It should be made obligatory upon the town or city to furnish to the state as correct a return of vital statistics as of matters relating to taxes or other financial questions.

The subject will be carefully considered, and such recommendations made to the next legislature as shall be deemed best calculated to remedy the defects named.

It is not to be inferred from the above that our statistics of

births are valueless. On the contrary, they are of the greatest value, not only as individual records, though this should be regarded as an indispensable duty of the state to the people, but in determining various questions affecting given localities, as well as the whole state. Calculations can be made upon ratios with a very great degree of accuracy, even though there may be more or less errors in the figures in a given case.

Births by sex, rate per 1,000 of the population, and nativity of parents by towns, will be found in the preceding table.

The following table exhibits the number reported from each county, with sex, and the excess of males over females. Also the number reported with sex not stated.

TABLE 4.

BIRTHS BY COUNTIES, SHOWING PROPORTION OF MALES TO FEMALES, 1884.

Total for state.....	3,198	2,946	252	163

The following table shows the percentage of American and foreign births, so far as the same could be classified. Of those classed under "parentage not stated," it is probable that the greater part would have been under the "foreign born" column if the facts in the case had been attainable. Of the 6,247 births reported, the parentage is as follows: American, 3,497; foreign, 1,430; American mother and foreign father, 340; American father and foreign mother, 324; not stated, 656.

TABLE 5.

MARRIAGES.

During the year 1884 there were recorded 3,292 marriages, 203 less than were recorded in 1883. This falling off in numbers reported occurred in Strafford, Belknap, Hillsborough, Cheshire, and Sullivan counties. The percentage of decrease was largest in Sullivan and smallest in Hillsborough county. This decrease was very slight in the class "Both American," being only 26 less

than the number reported last year; in the "Both foreign" class, 16 less; in the class "Husband American," 12 less; "Wife American," 17 less; "Not stated," 130 less. This would seem to indicate that the falling off was among the poorer class,—among those who were unable to furnish even a personal record of themselves or of their parents.

The following table exhibits the number of marriages for the year 1884, by counties and nativity:

TABLE 8.

Counties.	Both American.	Both foreign.	Husband American.	Wife American.	Not stated.	Total.
Rockingham.....	323	34	21	16	25	419
Strafford.....	273	73	21	13	35	415
Belknap.....	121	12	6	4	4	147
Carroll.....	146	3	4	18	171
Merrimack.....	262	32	21	6	23	344
Hillsborough.....	458	220	54	46	108	886
Cheshire.....	193	14	10	5	16	238
Sullivan.....	114	4	5	3	12	138
Grafton.....	270	11	12	14	25	332
Cotis.....	126	25	22	18	11	202
Total.....	2286	425	175	129	277	3292

In the following table it is interesting to note the sexes by age for the different classified periods. The six that were under 15 when married were females. Of the 1,037 who married before reaching the age of 20, 140 were males and 897 females; of the 3,459 who married before reaching 25, 2,125 were females—an excess over males of 791. For each successive period of classification of those above 25, the males are in excess.

November seems to have been the most favored month for marriages, and March the least so.

TABLE 10.

Counties.	Instances in which the age of the bride exceeded that of the groom.	Widowers.		Third marriage.		Fourth marriage.		Fifth marriage.		Oldest.		Youngest.		Oldest couple.		Youngest couple.

Total for state.....	441	547	404	57	16	8	1	3	..	88	73	17	13	74	60	17	15

The above table presents interesting and curious facts gleaned from the records. Four hundred and forty-one brides were older than their respective grooms; 540 females were married a second time, 16 a third time, and one a fourth time. Four hundred and four males married a second time, 57 a third time, and 8 a fourth time. Of the males married, the oldest was 88 years; the oldest female 73 years; the oldest couple—male, 74; female, 60. The youngest male married was 17 years; the youngest female, 13 years; the youngest couple—male, 17; female, 15.

COLORED MARRIAGES.

Four marriages were reported with both black; three with husband black and wife white. Two marriages of Indian women to white men were also reported.

DIVORCES.

DEATH, DURING THE YEAR ENDING DEC. 31, 1884.

A BRIEF SUMMARY OF THE RECORD OF DEATHS.

In the preceding tables will be found the usual information compiled in a registration report of this kind. A sufficient number of tables have been given to afford those in search of statistical matters relating to births, marriages, and deaths in the state a sufficient basis upon which to make such deductions as are usually sought for in studying the subject. Exception might be made, perhaps, in the question of occupation. This is so generally omitted in the reports received from the various towns, that it has been deemed best not to compile any tables based upon such meagre reports. It is expected that a system of registration will be sufficiently well perfected within a short time to warrant the introduction of interesting tables in relation to mortality by occupation. The reports for 1885, which are being received at the date of this writing, indicate a much fuller report under this head than has hitherto been given. It is possible that the next report will embrace some statistics upon the subject of occupation.

Seven hundred and seventy-three more deaths were reported for the year than were returned to this department in 1883, the total reaching 6,194. This gives a mortality rate for the state of 17.85 per 1,000 of the population. It is probable that the true rate of mortality does not vary much from 18 per 1,000 of the population. If this presumption is correct, it will be seen that the registration of deaths under the present law is very nearly perfect, and is a much better registration than has ever before been secured to the state.

The importance of a complete record can be understood only by those who are studying the subject of public health, or the special causes of disease. Certain allowable ratios have been established in relation to mortality rates, which have been determined upon by statistics gathered in this and foreign coun-

tries for a long series of years, and any variation from these established percentages indicates very much to the sanitarian. If these rates are in excess of those allowable under an average sanitary administration, it indicates at once that some sanitary neglect or some special cause for the increased mortality must exist which demands the attention of the health officers. In this way the record of deaths may and does indicate to the health officer the fields in which immediate work is required, or in which it is the duty of the authorities to make special investigations as to the cause of the increased mortality of that locality.

The law which was passed in 1883 has done very much toward perfecting the registration of the state. While it is possible that some amendments to the law might be made with advantage, yet it has been demonstrated in the short time that it has been in force that it is sufficient to secure a very complete record of deaths.

PRINCIPAL CAUSES OF DISEASE.

The diagram herewith given shows the principal causes of death, with the number of decedents for the year 1884. By comparing the diagram with that published for the year 1883 it will be seen that the positions of some causes are changed on the list. In 1883 pneumonia ranked second, while for the present year it takes the fifth position, showing that the fatality of the disease was not so great during the latter as in the former year. Heart disease, which in 1883 held the fourth place, has advanced to the second in 1884, while old age maintains the third place both years. Cholera infantum maintains the same position both years. Typhoid fever has descended from seventh position on the list of 1883 to the eleventh in 1884, showing a marked diminution of the disease. After a series of years these diagrams, if continued, will present very interesting matter for study by those interested in the change of disease from year to year.

CONSUMPTION,

as it always has done, stands at the head of the list, with 868 deaths, 385 more than recorded from any other cause.

Of the total number of deaths from this disease, 354 were

males, 513 females, and one with sex not stated. Last year 827 deaths—325 males and 502 females—were reported from consumption. It will be seen that the ratios are nearly the same.

The greatest number of deaths from this disease occurred in May. The monthly mortality was as follows: January, 79; February, 61; March, 68; April, 74; May, 101; June, 77; July, 72; August, 51; September, 65; October, 79; November, 68; December, 70; and two not stated.

Of the total decedents, 16 were under one year of age; 12 between one and five; 10 between five and ten; 21 between ten and fifteen; 94 between fifteen and twenty; 232 between twenty and thirty; 148 between thirty and forty; 96 between forty and fifty; 71 between fifty and sixty; 61 between sixty and seventy; 64 between seventy and eighty; 22 over eighty; and 20 not stated.

The percentage of deaths from consumption to the total mortality of the state was 14.01.

The percentage for the five cities was as follows:

Manchester,	14.28
Concord,	8.66
Nashua,	13.72
Dover,	16.60
Portsmouth,	14.74
Keene,	16.00

HEART DISEASE.

The total number of deaths classed under this head is 483, making this cause rank second on the list. Of this number 273 were males and 210 females. The most fatal month was July, in which 50 deaths occurred from this trouble, and the least fatal was February, with a record of 23. Fourteen were under one year of age; 1 between one and five; 4 between five and ten; 5 between ten and fifteen; 12 between fifteen and twenty; 19 between twenty and thirty; 26 between thirty and forty; 29 between forty and fifty; 57 between fifty and sixty; 95 between sixty and seventy; 141 between seventy and eighty; 70 over eighty; and ten, ages not given.

There was a large increase from this cause over the previous year, the latter showing 370 as against 483 for 1884.

OLD AGE.

There are 450 deaths registered under this head—194 males and 256 females. The ages were as follows: Between twenty and thirty, 1; between sixty and seventy, 5; between seventy and eighty, 347; over eighty, 4; not stated, 1. Twenty-eight died in January, 24 in February, 38 in March, 35 in April, 42 in May, 29 in June, 37 in July, 32 in August, 33 in September, 46 in October, 38 in November, and 58 in December.

APOPLEXY AND PARALYSIS.

Four hundred and forty deaths are registered under this head, which places it fourth in rank of numbers—223 males and 217 females. Of the ages, 4 were under one year; 2 between one and five; 1 between five and ten; 2 between fifteen and twenty; 5 between twenty and thirty; 21 between thirty and forty; 24 between forty and fifty; 44 between fifty and sixty; 104 between sixty and seventy; 143 between seventy and eighty; 81 over eighty; and 9 ages not stated.

Forty-seven died in January, 31 in February, 59 in March, 31 in April, 41 in May, 31 in June, 40 in July, 34 in August, 31 in September, 32 in October, 32 in November, 30 in December, and 1 not stated.

PNEUMONIA.

There was a less number of deaths from this disease than in the previous year, so that its place in the list is fifth, while in 1883 it was second. The total number for 1884 was 436, as against 498 in 1883. There were 55 fatal cases in January, 55 in February, 51 in March, 52 in April, 32 in May, 13 in June, 14 in July, 11 in August, 6 in September, 28 in October, 51 in November, 67 in December, and 1 not stated.

The ages of the decedents were as follows: Under one year, 52; between one and five, 48; between five and ten, 3; between ten and fifteen, 3; between fifteen and twenty, 6; between twenty and thirty, 27; between thirty and forty, 23; between forty and fifty, 30; between fifty and sixty, 36; between sixty and seventy, 50; between seventy and eighty, 97; over eighty, 54; not stated, 6.

It will be seen by the above that the disease is largely associated with infancy and old age. Its lowest rates are between one and twenty years of age.

The mortality was slightly greater in the female sex, the returns showing 211 males and 214 females, and one not stated. The greatest fatality prevails during the winter and spring months.

CHOLERA INFANTUM.

Two hundred and sixty-six deaths were reported from this disease, which is twelve less than were reported the previous year. The greatest proportionate mortality from this disease was, as in the past few years, in Manchester, which gave 112. The remarks made in the last report of this board concerning this disease still hold good. The following is the total mortality from the disease in the cities of the state:

Manchester,	112
Concord,	12
Nashua,	14
Dover,	10
Portsmouth,	3
Keene,	6

The fatality by months was as follows : January, 2 ; February, 1 ; March, 3 ; April, 1 ; May, 2 ; June, 4 ; July, 72 ; August, 80 ; September, 68 ; October, 29 ; November, 1 ; December, 1 ; not stated, 1. Of the ages, 213 were under one year, 48 between one and five, and 4 at various ages.

CANCER.

Two hundred and ten died from this disease—71 males and 139 females, reported as follows : Cancer, 126 ; cancer of bowels, 3 ; cancer of breast, 6 ; cancer of stomach, 39 ; cancer of uterus, 10 ; cancer of face, 3 ; cancer of rectum, 2 ; cancer of liver, 7 ; cancer of head, 1 ; cancer of lungs, 2 ; cancer of pancreas, 1. Of these, 13 died in January, 20 in February, 22 in March, 14 in April, 21 in May, 13 in June, 20 in July, 16 in August, 24 in September, 20 in October, 12 in November, and 18 in December.

MENINGITIS.

One hundred and thirty-five deaths are registered under this head—75 males and 60 females. Under one year of age, 34 ; between one and five, 36 ; between five and ten, 19 ; between ten and fifteen, 2 ; between fifteen and twenty, 7 ; between twenty and thirty, 3 ; between thirty and forty 3 ; between forty and fifty, 4 ; between fifty and sixty, 6 ; between sixty and seventy, 6 ; between seventy and eighty, 12 ; over eighty, 1 ; not stated, 2. The deaths occurred by months as follows : January, 8 ; February, 8 ; March, 12 ; April, 9 ; May, 17 ; June, 9 ; July, 11 ; August, 9 ; September, 11 ; October, 21 ; November, 13 ; December, 7.

DIARRHOEA AND DYSENTERY.

One hundred and thirty-one deaths resulted from these causes—56 males and 75 females—as follows : Under one year of age, 41 ; between one and five, 23 ; between five and ten, 4 ; between ten and fifteen, 1 ; between fifteen and twenty, 3 ; between twenty and thirty, 2 ; between thirty and forty, 3 ; between forty and fifty, 11 ; between fifty and sixty, 7 ; between sixty and seventy, 14 ; between seventy and eighty, 7 ; over eighty, 15 ; age not stated, 1. By months as follows : January, 0 ;

February, 3; March, 2; April, 8; May, 1; June, 4; July, 13; August, 27; September, 39; October, 25; November, 5; December, 3; not stated, 1.

DISEASE OF BRAIN.

There were 128 deaths from this disease—64 males, 63 females, and 1 not stated. The ages were as follows: Under one, 15; between one and five, 17; between five and ten, 5; between ten and fifteen, 4; between fifteen and twenty, 3; between twenty and thirty, 4; between thirty and forty, 10; between forty and fifty, 9; between fifty and sixty, 6; between sixty and seventy, 19; between seventy and eighty, 27; over eighty, 8; not stated, 1. Ten died in January, 11 in February, 11 in March, 13 in April, 7 in May, 13 in June, 5 in July, 5 in August, 13 in September, 14 in October, 11 in November, 16 in December, not stated, 1.

TYPHOID FEVER.

The showing for the year in this disease is very gratifying. There were reported, in 1882, 214 deaths; in 1883, 166 deaths; in 1884, 151 deaths,—from typhoid fever.

It is not unreasonable to believe, as stated in the last report, that the sanitary work which has been done during the years named may have contributed largely to such a result. It has been an especial object with this board to show that typhoid fever is a preventable disease, and that cleanliness, with pure water and air, are the preventives. We know that the public have given much more attention to these subjects during the short existence of our board than ever before in this state, and we believe its results are plain to be seen. It should be stated that in the 151 deaths recorded in 1884, there are included 14 deaths from "fever," 2 from "bilious fever," 14 from "gastric fever," and 4 from "typhus fever," which would leave 117 reported as typhoid fever. Of the 151 deaths included under this head, 66 were males and 85 females.

Eight died in January, 6 in February, 7 in March, 8 in April, 7 in May, 4 in June, 7 in July, 18 in August, 24 in September, 31 in October, 19 in November, and 10 in December. Of the

ages, 4 were under one year; 11 between one and five; 7 between five and ten; 12 between ten and fifteen; 22 between fifteen and twenty; 35 between twenty and thirty; 13 between thirty and forty; 11 between forty and fifty; 9 between fifty and sixty; 10 between sixty and seventy; 8 between seventy and eighty; 5 over eighty; and 3 ages not stated.

DIPHThERIA.

One hundred and ten deaths from diphtheria were recorded during the year, as against 109 for 1883. This relatively would be a little less than the proportion for 1883, since the registration embraces several hundred more deaths than were recorded during the previous year. Of the decedents, 49 were males and 61 females. The ages were as follows: Under one year, 8; between one and five, 39; between five and ten, 34; between ten and fifteen, 17; between fifteen and twenty, 4; over twenty, 7; and not stated, 1.

The fatality by months was: January, 8; February, 4, March, 15; April, 8; May, 10; June, 14; July, 5; August, 7; September, 6; October, 5; November, 12; December, 16.

BRIGHT'S DISEASE.

One hundred and seven deaths occurred from this disease—70 males and 37 females. Between one and five years of age, 2; between five and ten, 2; between ten and fifteen, 1; between fifteen and twenty, 5; between twenty and thirty, 7; between thirty and forty, 12; between forty and fifty, 11; between fifty and sixty, 23; between sixty and seventy, 18; between seventy and eighty, 22; over eighty, 2; not stated, 2. Of these, 6 died in January, 17 in February, 8 in March, 15 in April, 7 in May, 11 in June, 10 in July, 5 in August, 4 in September, 7 in October, 10 in November, 7 in December.

DROPSY.

There were 80 deaths recorded under this head—24 males and 56 females. Under one year of age, 1; between one and five, 2; between five and ten, 1; between ten and fifteen, 0; between fifteen and twenty, 2; between thirty and forty, 2; between forty and fifty, 7; between fifty and sixty, 8; between sixty and seventy, 16; between seventy and eighty, 22; over eighty, 18; not stated, 1. In January there were six deaths; February, 3; March, 10; April, 3; May, 5; June 11; July 5; August, 7; September, 4; October, 14; November, 5; December, 7.

BRONCHITIS.

There were 79 deaths from this disease—35 males and 44 females. Under one year of age, 15; between one and five, 8; between five and ten, 1; between ten and fifteen, 1; between fifteen and twenty, 0; between twenty and thirty, 5; between thirty and forty, 5; between forty and fifty, 3; between fifty and sixty, 10; between sixty and seventy, 4; between seventy and eighty, 13; over eighty, 13; not stated, 1. Of these, 4 died in January, 6 in February, 13 in March, 8 in April, 3 in May, 4 in June, 8 in July, 2 in August, 7 in September, 10 in October, 6 in November, 4 in December.

CONVULSIONS.

Seventy-four deaths resulted from this disease—37 males and 37 females. Under one year of age, 30; between one and five, 32; between five and ten, 4; between ten and fifteen, 2; between fifteen and twenty, 1; between twenty and thirty, 0; between thirty and forty, 2. Died in January, 6; February, 2; March, 5; April, 7; May, 9; June, 4; July, 10; August, 7; September, 6; October, 12; November, 3; December, 3.

GENERAL DEBILITY.

Seventy-three deaths are registered under this head—41 males and 32 females. Under one year of age, 15; between thirty and forty, 3; between forty and fifty, 4; between fifty and sixty, 2; between sixty and seventy, 11; between seventy and eighty, 18; over eighty, 10; not stated, 1. These occurred as follows: January, 5; February, 1; March, 12; April, 6; May, 8; June, 7; July, 5; August, 5; September, 8; October, 7; November, 3; December, 5; not stated, 1.

PERITONITIS.

Fifty-six deaths occurred from this disease—29 males and 27 females. Under one, 1; between one and five, 3; between five and ten, 1; between ten and fifteen, 7; between fifteen and twenty, 6; between twenty and thirty, 15; between thirty and forty, 4; between forty and fifty, 0; between fifty and sixty,

4; between sixty and seventy, 9; between seventy and eighty, 3; over eighty, 2; not stated, 1. Seven died in January, 6 in February, 7 in March, 3 in April, 3 in May, 2 in June, 4 in July, 6 in August, 5 in September, 4 in October, 7 in November, 2 in December.

SCARLET FEVER.

Although the reports from physicians show that this disease has prevailed quite extensively in many parts of the state, it has been of a very mild form.

The number of deaths reported from this cause is 52, six less than were reported in 1883. The sexes are equally reported—26 of each. Eight died in January, 1 in February, 3 in March, 1 in April, 2 in May, 1 in June, 4 in July, 4 in August, 5 in September, 7 in October, 13 in November, 3 in December. Seven were under one year of age, 20 between one and five, 16 between five and ten, 8 between ten and fifteen, 1 between fifteen and twenty, and 4 between twenty and 30.

LIVER DISEASE.

Fifty-two deaths are registered under this disease—30 males and 22 females. Of these, 2 were under one year of age, 1 between ten and fifteen, 1 between fifteen and twenty, 2 between twenty and thirty, 1 between thirty and forty, 6 between forty and fifty, 19 between fifty and sixty, 8 between sixty and seventy, 8 between seventy and eighty, 2 over eighty, and 2 not stated. Two died in January, 7 in February, 7 in April, 13 in May, 5 in June, 5 in July, 3 in August, 1 in September, 3 in October, 3 in November, 3 in December.

Special reference might be made to many other diseases embraced in this report; but all the facts connected with such a record can be found embodied in the tables given in the main part of this report. Those given in the summary are the chief causes of death, and include those given in the diagram. Of the remaining causes of death all fall below the lowest figures given in the diagram mentioned.

Respectfully submitted,

Irving A. Watson.

State Registrar.

APPENDIX.

THE
NEW HAMPSHIRE REGISTRATION LAW.

AN ACT FOR THE BETTER REGISTRATION OF BIRTHS, MARRIAGES,
AND DEATHS.

Be it enacted by the Senate and House of Representatives in General Court convened :

SECTION 1. The secretary of the State Board of Health shall be the registrar of vital statistics for the state, and shall furnish to sextons, to clergymen, and others authorized to marry, to physicians, town-clerks, and clerks of the Society of Friends, a copy of this act, and suitable blanks for recording births, marriages, and deaths, so printed, with appropriate headings, as readily to show the following facts and such others as may be deemed necessary to secure an accurate registration :

I. The record of a birth shall state its date and place of occurrence, full Christian and surname (if named), color and sex of child, whether living or still-born, and the full Christian and surnames, color, occupation, residence, and birthplace of parents.

II. The record of a marriage shall state its date and place of occurrence, the name, residence, and official character of the person by whom solemnized, the full Christian and surnames of the parties, the age, color, occupation, and residence of each, the condition (whether single or widowed), whether first, second, or other marriage ; and the full Christian and surnames, residence, color, occupation, and birthplace of their parents.

III. The record of a death shall state its date, the full Christian and surname of the deceased, the sex, color, condition (whether single or married), age, occupation, place of birth, place of death, the full Christian and surnames and birthplaces of parents, and the disease or cause of death.

SEC. 2. The attending physician, accoucher, midwife, or other person in charge, who shall attend, assist, or advise at the birth of any child, living or still-born, within the limits of any town or city in this state, shall report to the clerk of such town, within six days thereafter, all the facts regarding such birth, as is required in section one of this act.

SEC. 3. Every person authorized to unite persons in marriage shall make a record of every marriage solemnized before him, in conformity with the requisitions prescribed for blank records of marriages in section one of this act, and shall within six days thereafter deliver or forward to the clerk of the town in which the marriage intention was recorded a copy of such record of marriage.

SEC. 4. Whenever any person shall die, or any still-born child shall be brought forth in this state, the physician attending at such bringing forth, or last sickness, shall fill out and deliver to the undertaker, town-clerk, or other person superintending the burial of said deceased person, a certificate, duly signed, setting forth, as far as may be, the facts required in the record of a death, according to section one of this act; and it shall be the duty of the undertaker, or other person having charge of the burial of said deceased person, to add to said certificate the date and place of burial, and having duly signed the same, to forward it to the clerk of the town or city, and obtain a permit for burial; and in case of any contagious or infectious disease, said certificate shall be made and forwarded immediately.

SEC. 5. In the case of any deceased person not having had the attendance of a physician in his or her last sickness, the town-clerk may issue and sign the certificate of death, upon presentation of such facts as may be obtained of relatives, persons in attendance upon said deceased person during said last sickness or present at the time of death, and the permit for burial shall be issued upon such information.

SEC. 6. No interment or disinterment of the dead body of any human being, or disposition thereof in any tomb, vault, or cemetery, shall be made without a permit as aforesaid, nor otherwise than in accordance with such permit. No undertaker or other person shall assist in, assent to, or allow any such inter-

ment or disinterment to be made, until such permit has been given as aforesaid ; and it shall be the duty of every undertaker or other person having charge of any burial-place as aforesaid, who shall receive such permit, to preserve and return the same to the clerk of the town within six days after the day of burial.

SEC. 7. The town-clerk may appoint suitable and proper persons, not exceeding two in number in any town, as sub-registrars, who shall be authorized to issue burial permits based upon a death certificate, as hereinbefore provided, in the same manner as is required of the town-clerk ; and the said record of death upon which the permit is issued shall be forwarded to the town-clerk within six days after receiving the same, and all permits by whomsoever issued shall be returned to the town-clerk, as required by section seven of this act. The appointment of sub-registrars shall be made with reference to locality, so as to best convenience the inhabitants of the town.

SEC. 8. The clerk of every town shall keep a chronological record of all births, marriages, and deaths reported to him, and shall annually, in the month of January, transmit a copy of the record of all births, marriages, and deaths occurring during the year ending December 31st next preceding such said report, to the state registrar, together with the names, residences, and official stations of all such persons as have neglected to make returns to him in relation to the subject-matters of such records, which the law required them to make.

SEC. 9. The state registrar shall cause the returns made to him in pursuance of the preceding section to be arranged, alphabetic indexes of all the names contained therein to be made, and the whole bound in convenient volumes and carefully preserved in his office. He shall annually make and publish a general abstract and report of the returns of the preceding year in such a form as will render them of practical utility, not more than one thousand copies of which shall be printed, one copy of which shall be forwarded to every town, one copy to each senator and representative, one copy to each state and territory in the Union, and the remainder to such departments, libraries, and persons as the state registrar shall direct.

SEC. 10. The town-clerk's record of any birth, marriage, or death, or a duly certified copy thereof, shall be *prima facie* evi-

dence of such birth, marriage, or death, in any judicial proceeding.

SEC. 11. If any person shall wilfully neglect or refuse to perform any duty imposed upon him by the provisions of this act, he shall be fined not more than one hundred dollars for each offence, for the use of the town in which the offence occurred, and it shall be the duty of the state registrar to enforce this section as far as comes within his power.

SEC. 12. The fees of physicians for making returns of each birth and death, as herein provided, shall be the same as are now in force; and the clerk of each city and town shall be paid by such city or town for receiving, recording, and returning the facts required to be recorded by this act, the sum of fifteen cents for each birth, marriage, and death.

SEC. 13. This act shall take effect and be in force on and after the first day of January, 1884; and all acts and parts of acts inconsistent with this act are hereby repealed.

REGISTRATION REPORT.

To His Excellency the Governor and the Honorable Council :

The sixth annual report relating to the registration and return of births, marriages, divorces, and deaths, for the year ending December 31, 1885, is herewith presented. The same order of arrangement, in respect to tables, has been maintained as in previous reports. Some additional information relative to certain diseases has been added. It is believed that the facts given in relation to marriages are as nearly correct as can be attained under any law. A comparison of the tables on this subject with those published in other States leads to the belief that approximate accuracy has been secured.

The registration of births is not so accurate, for the reason that a large number probably remain unreported, and of those reported a large number lack the name of the child. Some additional legislation is necessary to perfect the registration of births. The report made within six days after the birth seldom contains the name of the child. From a historical or genealogical standpoint, and in legal questions where the identity of the person is concerned, the record of the name of the child, as well as of its parents, date of birth, etc., are essential. On the other hand, unless the physician's return is made within a few days after the event, it is liable to be overlooked or forgotten ; consequently no return would be made by him.

Again, there are a large number of births unattended by any physician, which are not reported to the local registrar. To obviate the defects which exist from these causes it is necessary to make some change in the law. There are two ways suggested : First. That a return of every birth which occurs during the calendar year preceding the annual return of the inventory blanks should be entered upon such blanks by the parents, with all the facts which the law calls for. Such an entry could be as easily made as any other fact called for by the inventory blank. As these inventory blanks are not returnable until April, every child would be at least three months old, and nearly all of them would have been named. The assessors or selectmen should then place these returns in the hands of the local registrar for recording, and the return to the state registrar would then be made in May instead of in January. This method might be supplemented by giving the local registrar a reasonable fee for discovering and reporting any births not returned, and for

securing and recording the names of those children who were not named when the inventory blank was returned.

Second. The local registrar might be made responsible for the thorough enforcement of the registration law within his jurisdiction, and be required to collect all facts called for by the law, and not otherwise reported to him. This method, however, would probably be attended with greater expense than the other, and would not be as effectual in the aggregate, as its enforcement would depend in a great measure upon the interest manifested by the local registrar and the compensation allowed.

The registration of marriages is as complete as can be secured under any system; in fact, it may be said to be correct, very few marriages remaining unreported.

Under the present system of requiring burial permits, the record of deaths has been brought to a degree of perfection that makes the record, so far as numbers are concerned, very nearly correct. This opinion is based upon the death rate. The difficulty with which it was thought the operation of this law would be attended has been found by experience to have but little foundation, and the accuracy of registration has been greatly improved thereby. In some instances there has been a little misunderstanding as to how and where a permit should be obtained, and under what circumstances it should be considered valid. For the information of those who do not clearly understand its provisions, the following brief statement is made:

1. A permit should be obtained in the town where the person died. The registrar of another town has no right to grant a permit.

2. A permit having been obtained according to law, it should be received by the authorities of any other town without question, and a second permit, except in case of disinterment, should not be required.

3. The return by the undertaker or sexton should always be made to the registrar of the town or city where the death occurred, without regard to the place of burial. Permits properly issued by authorities of other States should be recognized as valid in this State.

Local registrars should consider themselves responsible for the enforcement of the law within their respective towns and cities. They should inform the undertakers of the provisions of the law (copies of which will be furnished by the state registrar), and in all instances should require that permits be obtained before burial. Local registrars are also requested to notify the state registrar of any violations of the law that may come to their knowledge. Local registrars should at all times be provided with blanks for their own, sub-registrars', and physicians' use, which may be obtained from the state registrar upon application.

The attention of physicians is called to the nosological table which this report contains:

TABLE 1.
Showing Births, Marriages, and Deaths for 1880, 1881, 1882, 1883, 1884, and 1885, with Annual Increase in number reported.

Yearly increase since 1880 in numbers reported...	366	1,569	26	97	72	201	603	62	- 203	- 112	821	351	420	773
Total increase in numbers reported since 1880....	1,875	1,901	1,968	2,070	804	866	663	551	1,172	1,592	2,365	2,372

Table 1 shows the number of births, marriages, and deaths for a period of six years, with the variations in the number annually reported. An examination of this table shows that there has been a constant improvement in the registration since the first report was made in 1880. During the period mentioned there has been a gain of 2,070 births, 551 marriages, and 2,372 deaths. In 1884 and 1885 there was a falling off in the number of marriages reported. In 1884 there were 203 less marriages reported than in 1883, and in 1885 112 less than in the preceding year. This decrease in marriages is believed to be actual, and not a defect in registration. The cause for this decrease may, perhaps, be better explained by those who are studying the subject of social science.

TABLE 2.

Population of 1880; Births, Marriages, and Deaths, with percentage of each to one thousand of the population, for the year ending December 31, 1885, by Counties.

COUNTIES,	Population 1880.	Births.	Rate per 1,000 of population.	Marriages.	Rate per 1,000 of population.	Deaths.	Rate per 1,000 of population.
Rockingham.....	49,064	640	13.04	447	9.11	911	18.56
Strafford.....	35,558	621	17.46	388	10.91	619	17.40
Belknap.....	17,948	256	14.26	150	8.35	289	16.10
Carroll.....	18,224	245	13.44	182	9.98	269	14.77
Merrimack.....	46,300	734	15.85	361	7.79	796	17.19
Hillsborough.....	75,634	1,952	25.80	815	10.77	1,701	22.48

Sullivan.....	18,161	267	14.70	109	6.00	284	15.63
Grafton.....	38,788	631	16.26	327	8.43	611	15.75
Cos.	18,580	462	24.86	168	9.09	227	12.21
Total.....	346,991	6,319	18.21	3,180	9.16	6,201	17.87

It will be seen by this table that the

Birth rate for the State is 18.21 per 1,000 of the population.

Marriage rate " 9.16 " "

Death rate " 17.87 " "

The birth rate is too low, showing that the registration is incomplete. An examination of corresponding reports for Massachusetts shows a birth rate of 25.12 to 1,000 of the population.

Rhode Island . 24.00 " "

Connecticut . 23.05 " "

The highest rate in this State is returned from those counties which contain a relatively large number of the laboring classes. Hillsborough county, with its great number of factory operatives, reports 25.8 per 1,000; Coös county, which has a large number of laborers engaged in the lumbering business, ranks next, 24.86 per 1,000; and Cheshire and Strafford counties next in order, with 17.78 and 17.46 respectively.

The marriage rate is highest in Hillsborough county, followed by Strafford, Rockingham, Carroll, and Coös in order. The marriage rates for Massachusetts, Rhode Island, and Connecticut are 8.78, 8.40, and 7.89 respectively. It will be seen that our marriage rate, 9.16, is greater than in the States named.

The death-rate column shows that the greatest defect in registration exists in Coös county, where it is given as 12.21 per 1,000. It is believed that the death rate for the State, if correctly reported, would be between 18 and 19 per 1,000. The rather high rate of mortality in Hillsborough county is due largely to the fatality among the lower classes in the manufacturing cities.

BIRTHS.

There were reported for the year 6,319 births, 3,188 males and 3,053 females. The excess of male children is in about the same proportion as exists in other States. In 78 cases the sex is not stated. Under the head of parentage we find that 3,413 have parents both American; 1,506, parents both foreign; 350, American mother and foreign father; 334, American father and foreign mother; and 716, parentage not stated.

These figures present some interesting facts in connection with the subject of nativity of parents. The last census gave for this State a native population of 300,697; foreign-born, 46,294, — or, in other words, the foreign population was 10.45 per cent of the total population of the State, while the births from foreign parentage were 44 per cent of the American and 23.83 per cent of the total number of births for the year. It is probable that this rate should be increased by the greater part of those classed under "not stated" in the classification of parentage, as they undoubtedly belong largely to the foreign-born population. The columns of mixed parentage are very nearly balanced. Thus, it will be seen that while the foreign population is only about 10 per cent of the total, the births from foreign-born parents probably exceed 30 per cent of the total.

It is probable that the rate would be still further increased if there were a full registration of all births, as the deficiency is confined largely to the unreported among this class.

The same ratio in marriages does not by any means hold good. There were 2,218 marriages "both American," 368 "both foreign," and 282 "not stated." The columns "husband American" and "wife American" nearly balance.

The "both foreign" marriages were 16.59 per cent of the "both American," and 11.57 per cent of the total number of marriages. If the entire number classed under "not stated" were added to the column "both foreign," it would then be only 29.30 per cent of the marriages classed under "both American," and 20.44 per cent of the total number.

Of the 6,201 deaths 4,847 were native-born, 578 foreign-born, and 758 not stated. Those known to be foreign-born were 11.92 per cent of those known to be American-born. If the "not stated" are added to the "foreign-born," where doubtless many of them belong, they would then be 21.54 per cent of the total number of deaths.

TABLE 4.

BIRTHS BY COUNTIES, SHOWING PROPORTION OF MALES TO FEMALES, 1885.

COUNTIES.	Males.	Females.	Excess of Males.	Excess of Females.	Sex not stated.

Hillsborough.....	32.42	32.68	9.98	486
Cheshire.....	65.16	17.02	12.72	26
Sullivan.....	76.77	10.86	9.73	7
Grafton.....	67.51	13.78	12.04	42
Cook.....	47.18	30.30	15.15	34
Total for State.....	54.01	23.83	10.82	716

This table shows the percentage of births more fully than was given above. It is interesting to note the percentages in different counties. It will be seen that in Hillsborough county the births of foreign-born parents exceed the native-born. Of course the foreign population is greatest in those counties having manufactories. This is illustrated by Hillsborough and Carroll counties, the latter having but few manufactories.

TABLE 6.

DIAGRAM I. SHOWING THE COMPARATIVE MORTALITY, BY ABSOLUTE NUMBER OF DECEDENTS, FROM TWENTY PROMINENT CAUSES OF DEATH DURING THE YEAR ENDING DECEMBER 31, 1885.

A BRIEF SUMMARY OF THE RECORD OF DEATHS.

CONSUMPTION.

as in previous years, caused more deaths than any other single disease, 857 being reported from this cause alone; of these 373 were males, 480 females, and 4 sex not stated. The record by month is as follows: January, 71; February, 82; March, 87; April, 79; May, 83; June, 96; July, 64; August, 54; September, 54; October, 65; November, 65; December, 55; month not stated, 2. 31 were under one year of age, 14 between one and five, 4 between five and ten, 11 between ten and fifteen, 87 between fifteen and twenty, 219 between twenty and thirty, 161 between thirty and forty, 109 between forty and fifty, 75 between fifty and sixty, 75 between sixty and seventy, 43 between seventy and eighty, 19 over eighty, and 9 age not stated. The mortality from consumption was 13.81 per cent of the total mortality for the State. In 1883 it was 14.01 per cent. The percentage of consumption to the total mortality in the cities was as follows:

Manchester	13.03
Concord	10.68
Nashua	14.86
Dover	16.17
Portsmouth	12.18
Keene	22.80

CANCER.

There were 213 deaths from cancer, 74 males and 139 females. Cancer, 130; cancer of bowels, 6; cancer of brain, 1; cancer of breast, 5; cancer of face, 1; cancer of liver, 12; cancer of rectum, 3; cancer of stomach, 38; cancer of tongue, 1; cancer of uterus, 16. Of these, 24 died in January, 19 in February, 20 in March, 23 in April, 10 in May, 15 in June, 13 in July, 13 in August, 11 in September, 21 in October, 22 in November, 21 in December, and 1 not stated.

TYPHOID FEVER.

There were reported 141 deaths from this cause, 67 males and 74 females. This included 4 deaths from "fever," 5 from "bilious fever," 5 from "gastric fever," and 3 from "typhus fever," which would leave 124 from typhoid fever, as reported. Of the decedents, 2 were under one year of age, 7 between one and five, 8 between five and ten, 11 between ten and fifteen, 21 between fifteen and twenty, 35 between twenty and thirty, 14 between thirty and forty, 8 between forty and fifty, 8 between fifty and sixty, 10 between sixty and seventy, 12 between seventy and eighty, 3 over eighty, and 2 not stated; 8 died in January, 8 in February, 13 in March, 7 in April, 12 in May, 13 in June, 3 in July, 8 in August, 28 in September, 17 in October, 13 in November, 11 in December.

MENINGITIS.

135 deaths are recorded under this disease, 70 males, 64 females, and 1 sex not stated. Of these, 37 were under one year of age, 38 between one and five, 11 between five and ten, 5 between ten and fifteen, 8 between fifteen and twenty, 11 between twenty and thirty, 10 between thirty and forty, 2 between forty and fifty, 5 between fifty and sixty, 1 between sixty and seventy, 5 between seventy and eighty, 2 age not stated; 11 died in January, 15 in February, 10 in March, 14 in April, 9 in May, 15 in June, 8 in July, 15 in August, 7 in September, 11 in October, 11 in November, 9 in December.

BRIGHT'S DISEASE.

112 deaths from this disease, 70 males and 42 females; 2 were under one year of age, 2 between one and five, 5 between ten and fifteen, 3 between fifteen and twenty, 9 between twenty and thirty, 17 between thirty and forty, 12 between forty and fifty, 14 between fifty and sixty, 22 between sixty and seventy, 20 between seventy and eighty, 5 over eighty, and 1 age not stated; 7 died in January,

8 in February, 13 in March, 11 in April, 12 in May, 12 in June, 8 in July, 8 in August, 8 in September, 7 in October, 12 in November, 6 in December.

BRAIN DISEASE.

There were 109 deaths recorded under this head, 51 males and 58 females; 10 were under one year of age, 7 between one and five, 2 between five and ten, 1 between ten and fifteen, 1 between fifteen and twenty, 5 between twenty and thirty, 3 between thirty and forty, 1 between forty and fifty, 17 between fifty and sixty, 23 between sixty and seventy, 24 between seventy and eighty, 14 over eighty, and 1 age not stated; 9 died in January, 6 in February, 10 in March, 8 in April, 16 in May, 7 in June, 3 in July, 10 in August, 11 in September, 7 in October, 16 in November, 6 in December. "Softening of the brain" is included under this head.

BRONCHITIS.

Under this head there are 108 deaths, 41 males and 67 females; 28 under one year of age, 12 between one and five, 2 between five and ten, 1 between ten and fifteen, 2 between twenty and thirty, 4 between thirty and forty, 1 between forty and fifty, 3 between fifty and sixty, 10 between sixty and seventy, 19 between seventy and eighty, 25 over eighty, and 1 age not stated; 14 died in January, 12 in February, 14 in March, 13 in April, 15 in May, 10 in June, 2 in July, 2 in August, 7 in September, 10 in October, 4 in November, 5 in December.

DEBILITY.

There were 107 deaths from this cause, 55 males and 52 females; 48 were under one year of age, 3 between one and five, 4 between thirty and forty, 4 between forty and fifty, 1 between fifty and sixty, 12 between sixty and seventy, 18 between seventy and eighty, 17 over eighty. Of these, 5 died in January, 10 in February, 10 in March, 13 in April, 11 in May, 9 in June, 12 in July, 11 in August, 9 in September, 4 in October, 8 in November, 5 in December.

DIARRHŒA AND DYSENTERY.

One hundred deaths occurred from these diseases, 46 males and 54 females; 24 were under one year of age, 16 between one and five, 3 between five and ten, 2 between twenty and thirty, 3 between thirty and forty, 6 between forty and fifty, 5 between fifty and sixty, 14 between sixty and seventy, 14 between seventy and eighty, 12 over eighty, and 1 not stated; 5 died in January, 2 in February, 3 in

April, 3 in May, 9 in June, 16 in July, 26 in August, 20 in September, 9 in October, 3 in November, and 4 in December. The deaths from "cholera morbus" are included under this head.

DROPSY.

There were 91 deaths from dropsy, 39 males and 52 females; 2 were between one and five years of age, 2 between ten and fifteen, 2 between twenty and thirty, 3 between thirty and forty, 6 between forty and fifty, 12 between fifty and sixty, 20 between sixty and seventy, 26 between seventy and eighty, 13 over eighty, and 5 not stated; 9 died in January, 5 in February, 15 in March, 4 in April, 6 in May, 12 in June, 4 in July, 8 in August, 1 in September, 11 in October, 8 in November, 7 in December, and 1 not stated.

DIPHTHERIA.

Seventy-eight deaths are recorded under this head, 37 males and 41 females; 10 were under one year of age, 32 between one and five, 22 between five and ten, 5 between ten and fifteen, 3 between fifteen and twenty, 4 between twenty and thirty, 1 between forty and fifty, 1 between fifty and sixty; 13 died in January, 5 in February, 3 in March, 2 in April, 5 in May, 2 in June, 3 in July, 6 in August, 6 in September, 9 in October, 12 in November, 12 in December.

The summary of diseases might be carried still further, but it is thought to be unnecessary. Special tables on other diseases can be constructed from the tables given in the main part of the report, excepting possibly data in reference to occupations, by any one who desires to study a given subject more in detail than is given in any single table. It is believed, however, that the present arrangement will show all the facts desired, although several tables may have to be consulted for that purpose. It is to be regretted that the reports of the several towns and cities are too incomplete upon the subject of occupation from which to compile tables that would be reliable in connection with general causes of death.

Respectfully submitted.

IRVING A. WATSON,

Registrar of Vital Statistics.

APPENDIX.

NAMES OF CAUSES OF DEATH.*

It should be stated that the nomenclature of diseases in the nosological arrangement on the following pages is not intended to include the names of the whole list of morbid phenomena affecting the human organism, but the names of such only as are directly the cause of death, or such as ordinarily predispose to or set in motion the morbid processes that end in death.

In the construction of the classification now adopted, use has been made of the results and conclusions of a committee of the Royal College of Physicians, of England (who have been engaged for several years in a revision of the British nomenclature of diseases), as far as such conclusions have been ascertained from brief reports in different medical journals, and from such other sources as were accessible (the complete report not having yet been issued), and from examination of the classifications in use in different countries in Europe and America.

It should be said that all these classifications have been and are essentially alike, that all have been based designedly on observed facts and most advanced conclusions in relation to pathological processes and morbid conditions, inductive, causative, progressive, and ultimate.

The statistical nosology will consist of two lists of causes of death.

A TABULAR LIST AND SUPPLEMENTAL LIST.

The tabular list comprises the chief or primary causes of death which will be used in Table 13, in the preparation of the Registrar's annual reports, and will, therefore, include all those named in the supplemental list, when the final arrangement is completed.

The supplemental list is subordinate to the tabular list, and contains synonyms, or names of related diseases, which may be actually, or are supposed to be, causes of death, and which are in addition to those in the tabular list, and which are often found in physicians' certificates of death. These will all have a place, in alphabetical order, in Table 18, and will be variously grouped under different heads in Table 13, as the figure which precedes each cause in the supplemental list will correspond with the figure of the head in the tabular list under which that cause is placed.

* Taken largely from the list prepared by the State Registrar of Rhode Island.

NOMENCLATURE OF CAUSES OF DEATH.

CLASSES.

- I. General Diseases. — A. Specific and febrile. (Zymotic.)
- II. General Diseases. — B. Cachectic. (Constitutional.)
- III. Special Diseases. — A. Functional or organic. (Local.)
- IV. Special Diseases. — B. Developmental. (Developmental.)
- V. Violent Deaths. — From injuries. (Violence.)

SUB-GROUPS OR ORDERS.

CLASS I. — ZYMOTIC DISEASES.

Order one, Miasmatic. Order two, Enthetic. Order three, Dietic.
Order four, Parasitic.

CLASS II. — CONSTITUTIONAL DISEASES.

Order one, Diathetic. Order two, Tubercular.

CLASS III. — LOCAL DISEASES.

Order one, Diseases of the Nervous System. Order two, Organs of Circulation. Order three, Organs of Respiration. Order four, Organs of Digestion. Order five, Urinary Organs. Order six, Reproductive Organs. Order seven, Osseous and Locomotory Organs. Order eight, Integumentary System.

CLASS IV. — DEVELOPMENTAL DISEASES.

Order one, Of Children. Order two, Of Women. Order three, Of Old Age. Order four, Of Nutrition.

CLASS V. — VIOLENT DEATHS.

Order one, Accidents and Negligence. Order two, Homicide. Order three, Suicide.

CLASS I.—ZYMOTIC DISEASES.

TABULAR LIST.

For Table 13 of the Registration Report.

ORDER ONE.—MIASMATIC.

- I. One.—
1. Carbuncle.
 2. Cholera, Asiatic.
 3. Cholera, sporadic.
 4. Cholera infantum.
 5. Cholera morbus.
 6. Croup (pseudo membranous).
 7. Diphtheria.
 8. Diarrhœa.
 9. Dysentery.
 10. Erysipelas.
 11. Fever, bilious.
 12. Fever, cerebro-spinal.
 13. Fever, intermittent.
 14. Fever, malarial.
 15. Fever, typhoid.
 16. Fever, typho-malarial.
 17. Fever, unspecified.
 18. Fever, yellow.
 19. Influenza (epidemic).
 20. Measles.
 21. Mumps.
 22. Metria (puerperal fever).
 23. Pertussis.
 24. Tonsillitis.
 25. Scarlatina.
 26. Small-pox.
 27. Varicella.

ORDER TWO.—ENTHETIC.

- I. Two.—
1. Glanders.
 2. Gonorrhea.
 3. Hydrophobia.
 4. Malignant pustule.
 5. Septicæmia.
 6. Syphilis.

SUPPLEMENTAL LIST.

Synonyms or Related Diseases.

ORDER ONE.—MIASMATIC.

- I. One.—
1. Anthrax.
 - Gangrenous boil.
 4. Entero-colitis, } Infantile.
 - Gastro-enteritis, }
 10. Hospital gangrene.
 - Pyæmia.
 - Phagadæna.
 - Phlegmon.
 15. Infantile fever.
 - Typhus fever.
 20. Rotheln.
 21. Parotitis.
 22. Child-bed fever.
 23. Whooping cough.
 24. Quinsy.
 25. Scarlet fever.
 - Angina maligna.
 26. Varioloid.
 27. Chicken-pox.
 - Miliaria.

ORDER TWO.—ENTHETIC.

- I. Two.—
2. Stricture of the urethra.
 - Gonorrheal ophthalmia.
 5. Necusis.

CLASS I. — ZYMOTIC DISEASES — *Continued.*

TABULAR LIST.	SUPPLEMENTAL LIST.
ORDER THREE. — DIETIC.	ORDER THREE. — DIETIC.
I. Three. — 1. Alcoholism. 2. Delirium tremens. 3. Inanition. 4. Purpura and scurvy.	I. Three. — 1. Intemperance. 3. Privation. Starvation. Neglect.
ORDER FOUR. — PARASITIC.	ORDER FOUR. — PARASITIC.
I. Four. — 1. Aphæ. 2. Worms. 3. Other parasites.	I. Four. — 1. Thrush. 2. Tapeworm. Trichianasis. 3. Scabies. Hydatids. Porrigo, favus, etc.

CLASS II. — CONSTITUTIONAL DISEASES.

ORDER ONE. — DIATHETIC.	
II. One. — 1. Gout. 2. Dropsy. 3. Anæmia. 4. Cancer, various. 5. Cancer of breast. 6. Cancer of stomach. 7. Cancer of uterus. 8. Noma (canker). 9. Mortification. 10. Rheumatism	II. One. — 2. Anasarca. 3. Leucocythæmia. Chlorosis. 4. Soft cancer. Epithelioma. Melanosis. Lupus. Other kinds of cancer. 9. Bed-sore. Dry gangrene. 10. Rheumatic carditis. Rheumatic synovitis. Rheumatic meningitis.
ORDER TWO. — TUBERCULAR.	
II. Two. — 1. Scrofula. 2. Tabes mesenterica. 3. Phthisis (pulmonary). 4. Hydrocephalus. 5. Tubercular meningitis.	II. Two. — 1. Psoas (lumbar) abscess. White swelling. Cretinism (goitre). Adenitis. Morbus coxarius. Pott's disease. 2. Tubercular peritonitis. 3. Hæmoptysis.

CLASS III. — LOCAL DISEASES.

TABULAR LIST.

ORDER ONE. — NERVOUS SYSTEM.

- III. One. — 1. Cephalitis.
 2. Cerebritis.
 3. Apoplexy.
 4. Paralysis.
 5. Insanity.
 6. Chorea.
 7. Epilepsy.
 8. Tetanus.
 9. Convulsions.
 10. *Brain diseases.**

ORDER TWO. — CIRCULATORY SYSTEM.

- III. Two. — 1. Pericarditis.
 2. Aneurism.
 3. *Heart diseases.**

ORDER THREE. — RESPIRATORY SYSTEM.

- III. Three. — 1. Epistaxis.
 2. Laryngitis.
 3. Bronchitis, acute.
 4. Bronchitis, chronic.
 5. Pleurisy.
 6. Pneumonia.
 7. Asthma.
 8. *Lung diseases.**

ORDER FOUR. — DIGESTIVE SYSTEM.

- III. Four. — 1. Gastritis.
 2. Enteritis.
 3. Peritonitis.
 4. Ascites.

SUPPLEMENTAL LIST.

- III. One. — 1. Phrenitis.
 Meningitis.
 Cerebro-spinal meningitis (sporadic).
 5. Monomania.
 Fright.
 Grief.
 Melancholia.
 Dementia.
 Rage.
 6. Hysteria.
 8. Laryngismus.
 Lockjaw.
 Trismus nascentium.
 10. Neuralgia cerebral.
 Neurasthenia.
 Disease of spinal cord.
 Neerencephalus (ramollissement).
 Thrombosis, cerebral.

- III. Two. — 1. Carditis.
 Endocarditis.
 3. Hypertrophia.
 Atrophia.
 Angina pectoris.
 Syncope.
 Arteritis.
 Ossification of arteris.
 Phlebitis.
 Hydropericardium.
 Embolus.
 Thrombosis.

* Manner stated.

SUGGESTIONS CONCERNING PHYSICIANS' CERTIFICATES OF DEATH.

It should be the endeavor to specify the causes of death as definitely and correctly as possible. It is not unusual to find a return of death with the physician's certificate naming the cause of death "Paralysis," "Paraplegia," "Fits," "Convulsions," "Dropsy," etc., which are merely secondary or consecutive causes, simply symptoms only, or results of some organic lesion or pathological derangement. Sometimes the alleged cause is really the final cause, as in a case of termination of life by paralysis, but the cause given as paralysis is not the determining cause. Apoplexy, or some lesion of the nervous centers, must be the original and determining cause of paralysis, paraplegia, hemiplegia, etc., and the determining cause should be stated as the primary in the return or certificate.

Convulsions are the symptoms or results of some antecedent or concurrent disease. They follow meningitis and other structural lesions of the nervous centers; they also occur from reflex derangement or disturbance of the nervous centers, as, in children, from intestinal irritation, or from inflammation, as in gastritis, enteritis, nephritis, etc. In such cases they may be contributory to death, and perhaps, in rare instances, a final cause, by inducing or taking

the form of tonic or tetanic spasm. But as contributory, or as a final cause, they are simply concomitant, and are not unfrequently manifestations of the desperate efforts of expiring vitality to regain original and normal control. They should find place as secondary causes only in certificates of death.

"Fits" is too unmeaning a term to be used in any case. The word in a medical sense literally means an attack, an occurrence, or succession of attacks of some physical or mental disturbance, as "fits of sickness," "fits of melancholy," etc., and is not properly used as synonymous with convulsions from any cause. It would be just as sensible to attribute a death to an "occurrence" or an "attack" as a cause, as to "fits," without other qualification.

"Dropsy" and "ascites" have been allowed to stand as determining causes of death because of extended use, and because of the obscurity with which their causes in rare instances are involved. We can scarcely conceive of a dropsical accumulation without antecedent organic or functional disorder, derangement of the absorbent or secretory system, or depravation of the blood. They are left in the tabular list with not a little reluctance. Paralysis is also left in the tabular list for a like reason, and with the same doubt of propriety.

"Inflammation" does not in any way define the cause of death. The organ or organs affected should be mentioned, or else the death must remain unclassified.

"Hemorrhage" is sometimes returned as a cause, but unless accompanied by a further statement no inference can be drawn as to the real cause of death. The suicide who cuts his throat frequently dies of hemorrhage; sometimes the patient with typhoid fever succumbs from the same cause, yet to report "hemorrhage" as the cause of death would leave the actual cause in obscurity.

It may be suggested that it is sometimes difficult, and occasionally impossible, to ascertain positively the chief or leading cause of death. The physician last in attendance may find several functional or structural diseases, the morbid conditions multiple and complex, and not only the initial derangement, but the succession of morbid processes—proximate, consecutive, and ultimate—inextricably entangled and lost to discovery.

The careful diagnostician will, however, even then be able to conceive the probable leading cause, but, whether or not, he will be able at least to ascertain the most prominent and controlling lesion or functional derangement then existing, and which may reasonably be accepted as the primary cause of death.

The preceding remark applies very properly to cases of adventitious diseases which prove fatal, when occurring in individuals already suffering from some chronic disease of slower progress, as when fatal dysentery attacks a consumptive person, or one having chronic nephritis dies from pneumonia. The acute disease occurring independently of the chronic disease is the chief cause of death, although the fatal event may have been made more sure by the existence of the antecedent disease, and although the antecedent disease would have ultimately caused death.

In attributing death to scrofula, tuberculosis, tumor, cancer, abscess, and other generic terms as causes, the organic structure or locality where the disease is developed should always be given, otherwise such terms are very indefinite, and discredit the acquirements of the certifying physician.

The objects desired in presenting the preceding nomenclature of causes of death, and the suggestions following, are to subserve the purpose of greater uniformity in the use of nosological terms, and to promote the accomplishment of entire definiteness, accuracy, and completeness in the physicians' certificates of causes of death.

THE NEW HAMPSHIRE REGISTRATION LAW.

AN ACT FOR THE BETTER REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Be it enacted by the Senate and House of Representatives in General Court convened :

SECTION 1. The secretary of the State Board of Health shall be the registrar of vital statistics for the State, and shall furnish to sextons, to clergymen, and others authorized to marry, to physicians, town-clerks, and clerks of the society of Friends, a copy of this act, and suitable blanks for recording births, marriages, and deaths, so printed with appropriate headings as readily to show the following facts and such others as may be deemed necessary to secure an accurate registration :

I. The record of a birth shall state its date and place of occurrence, full Christian and surname (if named), color and sex of child, whether living or still-born, and the full Christian and surnames, color, occupation, residence, and birthplace of parents.

II. The record of a marriage shall state its date and place of occurrence, the name, residence, and official character of the person by whom solemnized, the full Christian and surnames of the parties, the age, color, occupation, and residence of each, the condition (whether single or widowed), whether first, second, or other marriage; and the full Christian and surnames, residence, color, occupation, and birthplace of their parents.

III. The record of a death shall state its date, the full Christian and surname of the deceased, the sex, color, condition (whether single or married), age, occupation, place of birth, place of death, the full Christian and surnames and birthplaces of parents, and the disease or cause of death.

SECT. 2. The attending physician, accoucheur, midwife, or other person in charge, who shall attend, assist, or advise at the birth of any child, living or still-born, within the limits of any town or city

in this State, shall report to the clerk of such town, within six days thereafter, all the facts regarding such birth, as is required in section one of this act.

SECT. 3. Every person authorized to unite persons in marriage shall make a record of every marriage solemnized before him, in conformity with the requisitions prescribed for blank records of marriages in section one of this act, and shall within six days thereafter deliver or forward to the clerk of the town in which the marriage intention was recorded a copy of such record of marriage.

SECT. 4. Whenever any person shall die, or any still-born child shall be brought forth in this State, the physician attending at such bringing forth, or last sickness, shall fill out and deliver to the undertaker, town-clerk, or other person superintending the burial of said deceased person, a certificate, duly signed, setting forth, as far as may be, the facts required in the record of a death, according to section one of this act; and it shall be the duty of the undertaker, or other person having charge of the burial of said deceased person, to add to said certificate the date and place of burial, and having duly signed the same, to forward it to the clerk of the town or city, and obtain a permit for burial; and in case of any contagious or infectious disease, said certificate shall be made and forwarded immediately.

SECT. 5. In the case of any deceased person not having had the attendance of a physician in his or her last sickness, the town-clerk may issue and sign the certificate of death, upon presentation of such facts as may be obtained of relatives, persons in attendance upon said deceased person during said last sickness or present at the time of death, and the permit for burial shall be issued upon such information.

SECT. 6. No interment or disinterment of the dead body of any human being, or disposition thereof in any tomb, vault, or cemetery, shall be made without a permit as aforesaid, nor otherwise than in accordance with such permit. No undertaker or other person shall assist in, assent to, or allow any such interment or disinterment to be made, until such permit has been given as aforesaid; and it shall be the duty of every undertaker or other person having charge of any burial place as aforesaid, who shall receive such permit, to preserve and return the same to the clerk of the town within six days after the day of burial.

SECT. 7. The town-clerk may appoint suitable and proper persons, not exceeding two in number in any town, as sub-registrars, who shall be authorized to issue burial permits based upon a death certificate, as hereinbefore provided, in the same manner as is

required of the town-clerk; and the said record of death upon which the permit is issued shall be forwarded to the town-clerk within six days after receiving the same, and all permits by whomsoever issued shall be returned to the town-clerk, as required by section seven of this act. The appointment of sub-registrars shall be made with reference to locality, so as to best convenience the inhabitants of the town.

SECT. 8. The clerk of every town shall keep a chronological record of all births, marriages, and deaths reported to him, and shall annually, in the month of January, transmit a copy of the record of all births, marriages, and deaths occurring during the year ending December 31st next preceding such said report, to the state registrar, together with the names, residences, and official stations of all such persons as have neglected to make returns to him in relation to the subject-matters of such records, which the law required them to make.

SECT. 9. The state registrar shall cause the returns made to him in pursuance of the preceding section to be arranged, alphabetic indexes of all the names contained therein to be made, and the whole bound in convenient volumes and carefully preserved in his office. He shall annually make and publish a general abstract and report of the returns of the preceding year in such a form as will render them of practical utility, not more than one thousand copies of which shall be printed, one copy of which shall be forwarded to every town, one copy to each senator and representative, one copy to each State and Territory in the Union, and the remainder to such departments, libraries, and persons as the state registrar shall direct.

SECT. 10. The town-clerk's record of any birth, marriage, or death, or a duly certified copy thereof, shall be *prima-facie* evidence of such birth, marriage, or death, in any judicial proceeding.

SECT. 11. If any person shall willfully neglect or refuse to perform any duty imposed upon him by the provisions of this act, he shall be fined not more than one hundred dollars for each offence, for the use of the town in which the offence occurred, and it shall be the duty of the state registrar to enforce this section as far as comes within his power.

SECT. 12. The fees of physicians for making returns of each birth and death, as herein provided, shall be the same as are now in force; and the clerk of each city and town shall be paid by such city or town for receiving, recording, and returning the facts required to be recorded by this act, the sum of fifteen cents for each birth, marriage, and death.

SECT. 13. This act shall take effect and be in force on and after the first day of January, 1884; and all acts and parts of acts inconsistent with this act are hereby repealed.

[Approved September 7, 1883.]

AN ACT PROVIDING FOR A REPORT OF THE NUMBER AND CAUSES
OF DIVORCES.

Be it enacted by the Senate and House of Representatives in General Court convened:

SECTION 1. That the clerks of the supreme court shall, at the close of each term in their respective counties at which divorces are granted, make return to the registrar of vital statistics of the number of divorces decreed at that term, the causes thereof, the sex of the libellant, and the day of the decree.

SECT. 2. That it shall be the duty of the registrar of vital statistics to consolidate said returns, and publish them with his report of births, marriages, and deaths.

SECT. 3. That chapter 12 of the Session Laws of 1881 be and hereby is repealed.

SECT. 4. That this act shall take effect upon its passage.

[Approved July 9, 1885.]

AN ACT FOR THE BETTER PRESERVATION AND PUBLICATION OF
LOCAL VITAL STATISTICS.

Be it enacted by the Senate and House of Representatives in General Court convened:

SECTION 1. It shall be the duty of the clerks of towns and cities to furnish a transcript of the record of births, marriages, and deaths for each year, seasonably, to the proper municipal officers, for publication in the annual reports. The period to be annually covered by such transcripts and publication shall be fixed by regulation prescribed by the registrar of vital statistics for the State. Every printed annual town or city report shall contain a full and exact copy of such transcript for the town or city to which it relates.

[Approved October 6, 1887.]
